**A must for any pre-wire speaker installation!**

## Speaker Pre-Wire installation Kit

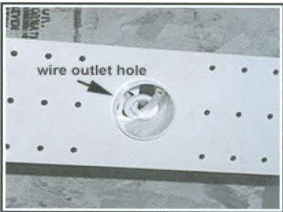

# Pre-Wire Installation Kit

The purpose of the EZ-Cap Pre-Wire Installation Kit is to allow easy access to the wiring for customers who wish to install speaker components in a structure in the future while remaining inconspicuous when not in use.

Audio/video contractors, electrical contractors, or any low-voltage contractor pre-wiring new construction homes, townhouses, condominiums, track homes, apartment buildings and commercial buildings for speaker components will find the **EZ-Cap Pre-Wire Installation Kit** invaluable. It gives the low-voltage contractor the ability to pick a location to pre-wire for a speaker component and secure the wire in place. After the wallboard is installed, the contractor returns to install the flush mount cap over the wire outlet hole in the drywall. The cap gives a low-voltage contractor future access to the wire for easy installation of a speaker component. At the same time, the cap is small and unobtrusive. The EZ-Cap cover can be painted to blend into the wall or ceiling.

The **EZ-Cap Pre-Wire Installation Kit** can also be used in other pre-wire applications such as security systems, garage door motor control wire, or any device that requires low-voltage wire to penetrate the drywall of a structure.
